WORK EXPERIENCE

ECFx (Electronic Court Filing Notice Automation)

Software Engineer

Remote - Fountain Valley, CA

April 2024 - Current

- Utilized web-crawling technology such as Playwright, JSoup, and Selenium to automate document processing thousands of documents daily.
- Leveraged tools like Postman, Fiddler, ChatGPT, and more to identify patterns in various government websites and email templates to effectively parse and process the court documents, designing clever solutions to pass guards like captcha and 2-factor authentication.
- Built admin panel interfaces for internal users to monitor automated services and have provided observability to non-technical users.
- Engineered automated tools to parse, annotate, and summarize documents while protecting user data and relay relevant analysis to stakeholders utilizing AI powered automation, with tools like Zapier, n8n, Langfuse, and LLM Guard.

Alpine Home Air

Full Stack Web Developer

Remote - Fountain Valley, CA

January 2023 - April 2024

- Architected and implemented scalable, multi-context chatbot applications with photo analysis, to collect and process customer conversations about their home projects to facilitate faster and tailored data collection for our sales team, leading to higher customer satisfaction and sales.
- Spearheaded adoption of AI-assisted development tools (Cursor, Claude Code, GitHub Copilot) across the engineering team, transforming code review cycles and accelerating feature delivery through automated testing and onboarding workflows.
- Deployed CreditKey payment system API into our backend infrastructure, enabling customers to pay using business credit. This integration streamlined the checkout process and expanded payment options, enhancing customer satisfaction and boosting sales.
- Utilized frameworks like langchain and litellm to create a model-agnostic ai tool for dynamic SEO optimized ad content. This tool generated content for over 1500 ad groups, significantly improving targeted marketing efforts and driving customer engagement and conversion rates all while streamlining our AB testing at scale.
- Developed a tax credit/rebate API, providing customers with easy access to valuable information that could potentially save them significant amounts of money. This integration enhanced customer loyalty and incentivized repeat purchases. The company saw an increase in positive reviews after deploying the feature to the customers.

Coding Temple

Software Engineer / Coding Instructor

Remote - Boston, MA

April 2021 - January 2023

- Integrated third-party APIs and services, like Google Calendar, Classroom, Gmail, Zapier, and PipeDrive, to automate steps in the admissions process workflow, saving the admissions team 25 minutes of onboarding labor per student that passes through the program.
- Leveraged the PyTest testing framework and Coverage.py to increase code coverage on the admission pipeline service by 15%.
- Wrote integration tests to assert expected behavior between the admissions service and in-class software modules.
- Implemented robust security measures including: authentication mechanisms (OAuth and Token Auth) and data encryption at rest, ensuring the protection of sensitive user data.
- Led eight 10-12 week classes with a comprehensive curriculum in Python and JavaScript frameworks and libraries, fostering a dynamic and engaging learning environment to equip students with practical coding skills and industry-relevant knowledge.

TECHNICAL PROJECTS

Job Application Tracker

[GitHub](#), [Web App](#)

Sole Developer

- Created a dynamic front-end interface using React JS libraries, enabling users to drag and drop “cards” tracking statuses on different job applications.
- Developed a modal to update job-specific details by making API calls asynchronously to handle CRUD operations while not degrading the user’s experience.
- Optimized data retrieval by following the lexicographical ordering paradigm, which minimizes the number of database calls necessary to handle sequence updates.
- Integrated Chrome extension hooks to sync job search data to the Job App Tracker in real time.

Interactive Coding Learning Platform

[GitHub](#), [Web App](#)

Sole Developer

- Developed an online interactive learning platform offering learning modules in coding/markup technologies like Python, JavaScript, HTML, and CSS complete with individualized user profiles.
- Designed a scalable user interface with modern UI principles to enhance the user experience.
- Implemented code sandboxing to protect the server by isolating real language-specific commands within each learning module.

NotiFi - Automated Price Drop Notification Application

[GitHub\(FE\)](#), [GitHub\(BE\)](#), [Web App](#)

Sole Developer

- Developed and maintained a Flask backend application capable of performing scheduled web scraping tasks on Amazon product pages to extract relevant details, including pricing information and product availability.
- Implemented token-based authentication using JWT tokens to secure the backend API endpoints, ensuring that only authorized users could access sensitive data and perform certain actions within the application.
- Developed a responsive and user-friendly frontend using React and TypeScript, adhering to best practices for making API calls and implementing cache invalidation strategies to optimize performance and minimize unnecessary network requests.
- Implemented data visualization features using charts to plot the price trends of monitored products over a specified period of time, providing users with valuable insights into price fluctuations and historical data.
- Implemented logging mechanisms to maintain detailed records of all notifications sent, including timestamps, recipient information, and the nature of the price changes. This facilitated accountability, troubleshooting, and performance analysis of the notification system.

Artist Disco - Music Finder

[GitHub](#), [Web App](#)

Sole Developer

- Designed and built a MERN based web-app, integrating Spotify’s API, to provide users a more intuitive way to discover musical artists, using features like “swiping” to harness the short attention span behavior to keep users engaged.
- Debugged issues and iterated over new features after beta testing and gathering community feedback from over 100 users on social media.
- Minimized the amount of necessary database calls by caching client data in the application state, reducing the number of network calls by a factor of 3.

SKILLS

React, TypeScript, Python, JavaScript, Flask, RabbitMQ, BullMQ, Django, ExpressJS, NodeJS, MongoDB, SQL, HTML, CSS
